TempBee™

TempBee™ helps you track real-time temperature of cold storage assets from anywhere in the world. Say you need to track cold storage temperature of vaccines and drugs or even ice cream outlets, TempBee will trigger alerts in case of breach in threshold limits for your quick action to ensure your end-customers consume a safe product.

Available in variants suitable for deep freezers, refrigerators, transit boxes, server rooms.

Key features:
- Measuring range of -50°C to 125°C
- Resolution +/- 0.25°
- Visual and audio alarms
- Both Wi-Fi and LoRa connectivity available

What we do

At Tinkerbee, we work with our business partners to understand what these data gaps are and how our smart devices and data services could best address them.

We develop end-to-end IoT solutions from hardware design and development to front end interactive dashboard.

We exist to maximize your life! #maximizeLife

Dashboards | Alerts | APIs
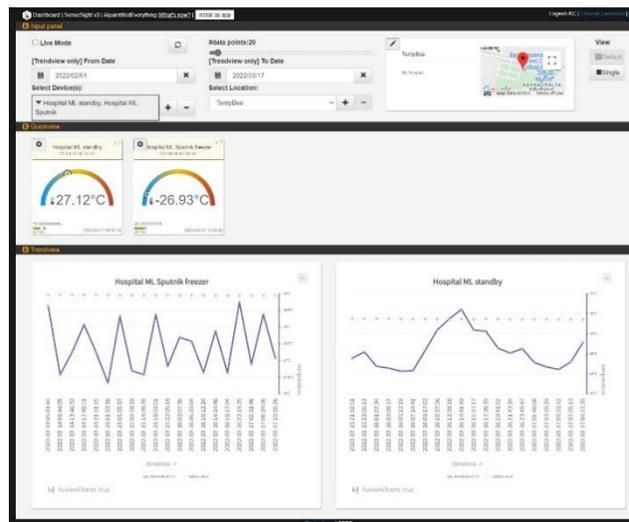

Track multiple assets across locations from a single dashboard.

Set visual/audio alarms and WhatsApp/email alerts over threshold breaches.

Our readily available APIs facilitate easy data integration with any legacy ERP dashboard, if needed.

EyeBee®

EyeBee® is a compact smart board that incorporates a state-of-the-art depth sensor. Say, you need to keep an eye on the amount of cleaning liquid in a barrel, the level of flood water in your basement, yacht or even the height of a stack of packets on the shop floor.

Available in variants suitable for outdoor and indoor applications; both WiFi and LoRaWAN™.

Key features:
- Patent pending consumption tracking system
- 2-meter/ 4 meter range
- Resolution 1 mm
- Long lasting battery up to 2 years

SwitchBee

SwitchBee® is is one of the world's smallest, safest, long-life, low-power, digital smart switches for cabinet LED light automation. These smart and tiny devices magically make lights inside (or outside) cabinets glow when the door / drawer is opened and ensures that the lights are off when closed.

Available in 2 variants: 1. **Magsense** and 2. **IRsense**

Key features:
- Easy to install. Fits inside a 10mm dia drill hole
- Fully digital solid-state sensors (no mechanical parts)
- Programmable soft ON / OFF (fading effect)
- Supports 12V and 24V LED drives; 10A current

WeatherBee

WeatherBee relays real-time weather updates almost instantly to help businesses corelate weather-induced demand-supply changes. Information on start / stop of rain in a specific locale can help them bridge demand-supply gap with prompt communication on incentives for delivery associates / drivers servicing rainy locales; also, swiftly notify customers about surcharges or weather themed sales callouts.

Key features:
- Truly small – 160x90x30 mm
- Tracks temperature, atmospheric pressure, Humidity, ambient light, rain start / stop timestamp and intensity of rain.
