A brief overview

#maximizeLife

What do we do?

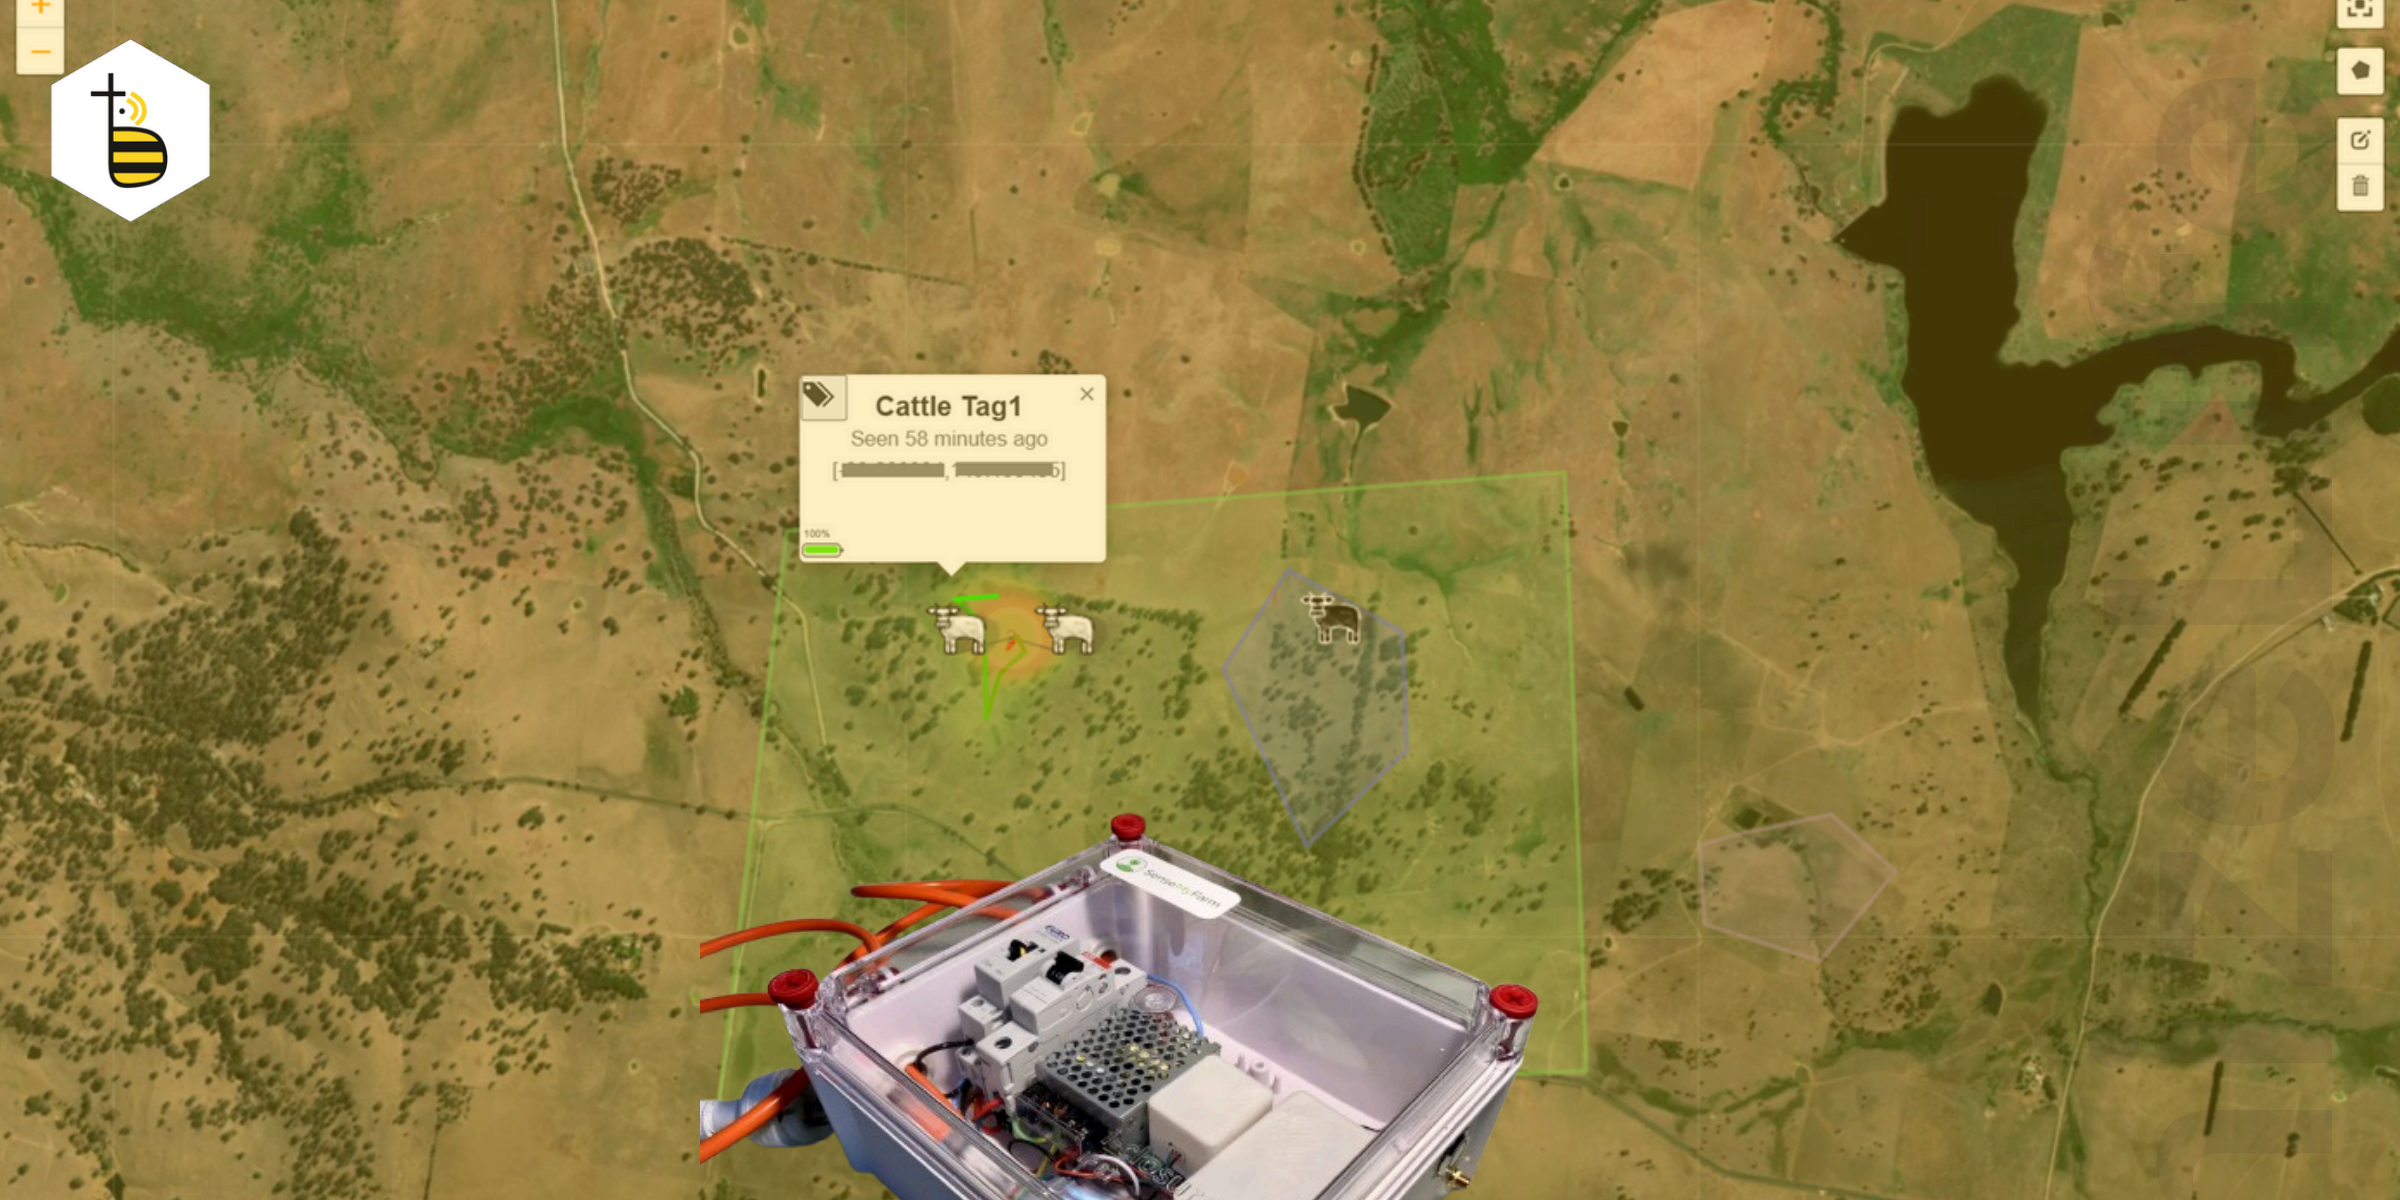

Tinkerbee addresses data and information gaps by deploying a swarm of our sensors (and sometimes readily available third-party sensors) in the right locations. We have always believed that magic happens when the physical and digital worlds come together.

When data from all these sensors is seamlessly integrated into our platform, and the platform delivers actionable insights, alerts, and visualizations, it creates value for end-users.

This has always been our mission.

#axinn

When a farmer in Australia uses our platform to monitor cattle movement (via solar LoRaWAN™ ear tags) or water level sensors, and can use the data from these sensors to automatically switch a remote water pump 7 miles away, on or off; without leaving the farmhouse—that's a lot of time and effort saved, especially in tough terrain or inclement weather!

When a biomedical sample storage room Temperature goes beyond the permissible range and the manager is immediately alerted via WhatsApp and e-mail alerts, it saves money and perhaps even lives. There's value there!

We have now sold about 200 of our wireless temperature/humidity/ environmental sensors called TempBee® and our platform handles about 5000 such WhatsApp™ interactions per month.

#maximizeLife

When we equip one of the largest premium wardrobe manufacturers in India with a completely hidden and miniaturized wardrobe LED switch, we offer a solution that is both aesthetic and functional.

This world-class solution was designed and developed in India. Over 3,000 families will be sliding their wardrobes open and seeing their spaces light up automatically, thanks to our sensors working diligently in the background. SwitchBee®

That's #maximizingLife!

#maximizingLife

When one of the largest last-mile delivery providers in India, needs hyperlocal weather data, we provide them this service through a swarm of our WeatherBee[®] devices and a simple API integration.

Raining on cats and dogs on MG Road while bone-dry on Patel Street? Worry not, we get this information to you in real-time so that you can obsess on your business!
